

GEO BRIDGE

GEO Bridge: The Geometric Base Explained

Narrative and mathematical guide to the GEO resolution

Central Idea: The universe is not necessarily broken; it may be out of focus due to the reading geometry. GEO constructs the "mathematical lens" to pass from one measurement to another.

The Mechanism: A conserved unit $T = A + B + L$. In Hubble phase, $\eta = 0.6$. The discrepancy is treated as a "Perspective Tension".

GEO Quantity	Value	Reading
$fc = \sqrt{\eta}$	0.774596...	Coupling factor
$R = \eta^{(1/3)}$	0.843432...	Transfer root

Manual Rule: $H_{GEO} = H_{base} * fc / \cos(\theta)$. Represents the visual version: a base value passes through a grain filter and a focal angle ($\theta \approx \pi/4$).
